

Advisory Service Overview

In Today's challenging business environment demands enterprises to empower their business and IT resources to move the next level of process innovation and gain competitive advantages. At iOnTech Consulting Group, we offer advisory services specializing in Oracle applications, **technology assessments, performance analysis, Business Intelligence Assessment** of your organizations' data, **R12 upgrade assessment, Platform migration** assessment, Oracle License Assessment and **processes improvements** to address your organizations's unique objectives. Our expert **define, measure, and successfully manage** your journey to business transformation. We not only assess but we also help you in making the right product choice, preparing your technology road map for alignment with your business goals, while partnering with you in process standardization through the right mix of technical expertise and proven methodologies.

Technology Assessments

Weather your project is in the initial planning or final phases of an implementation or upgrade, iOnTech Consulting Group can assess your current or planned infrastructure foot print to verify that the technical details of your project are in order. We work with your IT team (On Site or Remotely) to mine the necessary information to complete a full report on the current state of your IT infrastructure as well as make recommendations for future growth and performance. We also provide assistance with the procurement of hardware, including hardware RFP development.

Technology Assessment Includes:

- Current Environment overview
- Server and Workstation review
- Database and table sizing
- 3rd party product reviews
- Hardware and software compatibility
- New release over view
- Proposed environments
- Technical procedures
- Technical training plans
- Design layouts
- Production support plan
- Network & Security

Performance Analysis

iOnTech team of DBA's can proactively detect and resolve scalability and performance issues threatening productivity. We establish benchmarks for the load and throughput that the database can handle.

- Accelerate problem resolution with deeper visibility and baseline-driven alerts.
- Prevent performance problems iwth advance trend analysis
- Reduce cost by maximizing the performance of existing hardware, avoiding unnecessary upgrades or additional purchases.
- Our DBAs perform both real-time and historical analyses to uncover problems and determine the best course of action for optimal performance.

R12 Upgrade Assessment

iOnTech has developed to make the transition of R12 easier for enterprises and extract the full value of investment in Oracle E-Business Suite with our Assessment and Upgrade Management services. During the Assessment phase, we perform an automated analysis of your Oracle setups and the customizations in the existing environment. Then establish your real business objectives, identify the challenges and how they can be addressed in R12.

- **Customization impact analysis, • Upgrade vs. re-implementation recommendation, • Budgetary Upgrade Estimate, • High-Level Project Plan, • Assessment and recommendation for path to Oracle Fusion, • Detail Oracle R12 benefit analysis, • A plan for business continuity**

BI Assessment

iOnTech team will conduct a complete BI assessment of your organization's data and business processes to help you choose the best strategy to implement a BI solutions that is booth custom tailored to your needs and based on best practices. Our highly trained BI professional will augment your existing team and help to complete your mission critical projects.

Oracle Licence Assessment

Our Oracle Licence Assessment (OLM) service provides a valuable first step for customers looking to ensure maximum ROI in utilizing Oracle software in their IT environments. We evaluate the balance between your licensing assets in comparison to your business requirements today and for the future.
